

Disrupt the Hacker Timeline Now

Our 24/7 managed detection and response (MDR) platform combines network visualization, tradecraft detection, and endpoint security to rapidly detect and neutralize lateral movement in its earliest stages.

Faster than any other solution on the market, our technology harnesses metadata around suspicious events, hacker tradecraft, and remote privileged activity to catch what others miss and take real action before cyberthreats can spread.

Cyberattackers have you in their sights. What's your next move?

The only constant in the threat landscape is that it is always changing. As threat actors increasingly target small- to medium-sized businesses, building up a strong cybersecurity strategy is crucial. Don't bulk up your IT strategy with ineffective, non-scalable tools. Take a proactive, offensive approach to stay ahead of cybercriminals by adding continuous monitoring, real-time threat detection, and active response to your arsenal.

Harness our security stack to win the unfair fight, give hackers hell, and maintain operations day in and day out. This way, you can focus on running your business while we focus on protecting it.

The Threat Landscape: A Stark Reality

\$4.45M USD is the average total cost of a breach

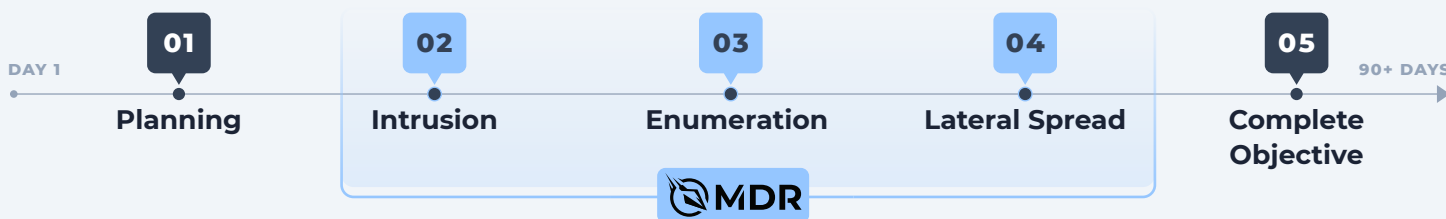

IBM Security's Cost of a Data Breach Report 2023

Only 1 in 3 breaches are identified by an organization's own security team or tool(s)

Up Against the Hacker Timeline

When an attack occurs, detection and response times determine whether attackers succeed in their efforts. With our security stack, we offer true, 24/7 MDR that fights back within minutes and closes the gap between the identification of an event and the actual response and remediation. By immediately isolating endpoints, we stop the threat from moving laterally into other systems.

See How We Fight

Patented Real-Time Threat Detection

We catch them fast and hit them hard. Through our proprietary security operations and incident response platform, our world-class SOC hunts for active threats in your environment and neutralizes them in their earliest stages. The technology is built from the ground up to give SOC analysts the ability to continuously monitor and respond to the modern threat landscape.

24/7 Incident Monitoring & Response

Established by former US government cybersecurity operators, our SOC leverages its deep knowledge of hacker tradecraft and real-world cyber experience to provide 24/7, unified detection and response services. Trust the fully managed SOC team to monitor your unique environment around the clock so you can focus on running your business.

Rapid Agent Deployment

Our world-class, nation-state-grade security stack is designed to serve businesses by completing the hard work for you. While other services on the market take days and weeks to tune events, we offer same-day agent deployment and start protecting your diverse environments within minutes. Trust us to provide a streamlined onboarding experience so you can get coverage without compromising your efficiency.

Your Partner in Protection
